The U.S. lift Truck division stationed in Cleveland has a professional team experienced in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

In the beginning the home-based forklift market in Korea was an open import enterprise. Korea Machinery Co. Ltd. began in 1960, to import fully assembled lift trucks as part of a domestic equipment expansion project. Sales of these products were primarily targeted to state-run companies, large scale corporations, and the armed forces. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical education became the new focus for improving quality and product development.

Daewoo started the first home-based lift truck business in 1967, and rapidly acquired a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's progressive technological improvements combined with sales success placed them in a position of substantial expansion of their lift truck operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint venture project to respond to competitive pressures in the US materials handling industry. This plan greatly expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a modern plant which helped establish the company for the fabrication of high added-value goods suitable for export. In 1993, the corporation had a global sales network and started exporting versions they had developed through in-house technology, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into overseas markets.
